TYRE UPGRADE

“Tyre Upgrade” means: increase of rim diameter without changing of tyre overall diameter, the trend in development of low aspect ratio is called upgrade.

• INCREASE OF SPORTY PERFORMANCE

The tyre response will be more sensitive when you turn the steering wheel that the flex of tyre will be reduced, and the performance of steering and handling stability will be better, especially under medium and high speed driving.

• ENHANCEMENT OF BRAKING ABILITY

The braking stability will be improved due to the decrease of tyre flex when you brake.

Under the condition of keeping general the same of tyre overall diameter, the tyre can be upgraded to:

14 inch 15 inch 16 inch 17 inch

Please refer to the clarifications set forth below to upgrade the tyre:

- Without any particular reason, please do not change the overall diameter of tyre easily. The alternation of tyre overall diameter will cause misreading of speedometer or mutual interference between tyre and other parts of vehicle.
- Please determine the width of tyre in accordance with the specific width of vehicle. If the width of the entire tyre is increased overly, it will cause mutual interference between tyre and other parts of vehicle, even heading out of the tyre from bodywork which will initiate danger.
- Notice the load index of vehicle when you upgrade the tyre. There is rule to the weight which the tyre can bear (load index) for each size. Please refer to the load index when you chose the proper size.
